

ABOUT THE COMPANY

Born in 1994, with the purpose of producing information solutions addressed to the local municipality offices and their numerous needs, GOLEM SOFTWARE represents by now an interesting and consolidated reality.

Widespread on the whole Italian territory, it can rely on the professionalism of our employees, on the support of six branches as well as on the confidence of a huge and faithful customer base.

Step by step, it became able to create a modular information system capable of sorting out different problems in the context of different working areas (such as bookkeeping, human resources, demographic, town planning etc); indeed, despite their being independent entities, GOLEM planning solutions have been conceived to work in synergy, as an integrated system, in order to preview an work out any possible management inefficiency.

GOLEM's development strategy grounds on the two concepts:

"Territorial Covering": trough its branches

and

"Partnership" which, involving the whole National area, allows the creation of a successful supply and assistance network of partners able to guarantee a high quality standard level.

THE PRODUCTS

GOLEM's SOFTWARE, aiming at sorting out numerous issues concerning the local municipality offices management can be easily adapted to the organizational necessities of any other kind of structure (Hospitals, Schools, Banks and so on).

Local Government Area Management

As far the urban reality is concerned, the importance of developing a successful data modifying, classifying and distributing management system, appears as crucial.

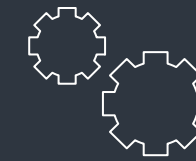

Indeed all citizens' information should be:

- Correctly distributed according to the competent area (Civil Status, Births, Deaths, etc.)
- Perfectly suitable by all connected division, for instance: the technique division (Building area etc.) and the tributary division (water, gas, and other taxes payment)

At the same time, with respect to the human resource and the economic areas, the competent offices have to properly organized.

It's a complex issue then, requiring the implementation of information resources which, as already said before, thought having a modular structure, should cooperate and be outfitted for potential additional custom modules.

GOLEM SOFTWARE brought its resources into play and managed to give all these questions the right answer.

CUSTOM SOLUTIONS

- DOCUMENT MANAGEMENT.
- FINANCIAL MANAGEMENT.
- TAXES MANAGEMENT.
- GEOGRAPHIC INFORMATION SYSTEMS.
- PRODUCTIVE ACTIVITIES.
- SOCIAL SERVICE MANAGEMENT.
- SINGLE CENTER BOOKING.

flexible solutions for any business need

GLOBAL SOLUTIONS COMPLETE AND RELIABLE.

WEB AREA

Web citizen-oriented solutions make the access to the personal information database easier.

Let's make some examples:

The app "OnLine Register Office", which supports the on-site register office software, allows the citizen to obtain personal information and certificates by simply giving a look to the town hall website and accessing his own personal area, thus sparing all the resources (time, money) usually exploited to reach the same goal.

The same goes with the BAC software which gives the access to the payment status of the Italian government taxes related to water and gas.

SYSTEM MANAGEMENT

The ICT infrastructure management in one of the critical success factors in a business efficiency context.

As a matter of fact, It's growing complexity and evolution require an a increasing economical investment

In order to give the IT environment a modular and cost-effective management, ensuring the optimal exploitation of the IT economic investment, GOLEM SOFTWARE has gained:

Competence, instruments and methods

PROFESSIONAL SERVICE

With respect to the whole information life-cycle system management, GOLEM SOFTWARE has always given its assistance procedures a huge importance.

To this purpose, its products have been properly associated to qualified post-selling services as: training, assistance (hotline, helpline, on-site), information and organizational consulting.

that is to say that it able to supply the entire hardware necessary, as well as the operative systems, server and database software.

Consequently, making GOLEM being the only protagonist within the ordinary operative activity, means leaving the customer free to concentrate himself on the business improving.
